

What a Waste: Trash, Recycling, and Protecting Our Planet By Jess French This book provides children with various ways of how they can keep their environment clean and safe while also including facts on what would happen if they did not acknowledge their actions and how it would negatively affect their environment/planet Earth. The book discussing many important environmental topics from pollution recycling and renewable energy this book can motivate students to make changes in their daily live that could make a great difference for our planet and environment. When using this book as a whole-class read-aloud I would make a lesson that allows students to interact with their families at home asking them what could they do around the house that could help our environment stay clean and healthy. For example students can report back to the class and their peers saying that they started recycling or stopped using paper plates and plastic utensils or they started a compost garden etc. What I really like about this book which is important to mention to students when reading the story to them and/or having them read on their own is that the book was made from recycled and responsibly sourced materials. Vet and author Jess French introduces this thought-provoking information book 'What a Waste' with 'humans are now producing more waste than ever before and our planet is suffering' and presents a challenge 'the power to make a positive change is in our hands. Did you know '92% of the world's people are breathing polluted air?' Discover why we need forests and learn about the threat to the orangutan population with the loss of their habitat. Simple but effective solutions are shown as well to reduce plastic in the ocean take three for the sea by removing rubbish on beach visits organise your own clean-ups and join in International Coastal Clean-up Day. 1465481419 Book Title: What a Waste: Trash Recycling I can create an anticipation guide prior to students reading this book or students can create Semantic Feature Analysis as they read about new topics. She hopes that the wonderful children that read her books will be kind enough to educate the silly grown ups they meet about animals the environment and what we can do to save them. She once ultrasounded a snow leopard and has also looked inside a crocodiles stomach! She is sometimes seen on CBeebies talking about minibeasts and also works as a teacher for school groups that are interested in Jess loves all animals. She hopes that the wonderful children that read her books will be kind enough to educate the silly grown ups they meet about animals the environment and what we can do to save them. She once ultrasounded a snow leopard and has also looked inside a crocodile's stomach! She is sometimes seen on CBeebies talking about minibeasts and also works as a teacher for school groups that are interested in animals and the natural world. Did you know that every single plastic toothbrush ever made still exists? Or that there is a floating mass of trash larger than the USA drifting around the Pacific Ocean? It is not all bad news though. From how to make your home more energy and water efficient to which items can be recycled and tips for grocery shopping this book is packed full of ideas on how you can get involved to make our planet a better place to live. This environment book for children has a wealth of ideas for becoming a planet-defending hero: - Discover shocking facts about the waste we produce and where it goes- Learn where about our Earth's limited resources and how to take some pressure off- Your trash is another man's treasure- Small changes to take your home from wasteful to super resource efficient- Dive into saving our oceans and super recycling- And much much more What a Waste is one of several nature books for kids written by Jess French a passionate conservationist and veterinarian committed to protecting the beautiful world we live in. What a Waste: Trash Recycling and Protecting Our PlanetБританското издателство Dorling Kindersley (известно повече като DK) има повече от богата традиция в илюстрираните научни издания за читатели от всички възрасти. От енциклопедии и пътеводители до всевъзможни картинни справочници DK са истински специалисти в качествения синтез оформление и представяне на фактите. Вниманието към детайлите е поразително дори когато изданията са посветени на фантастични или забавни теми като комикс герои научна фантастика или LEGO та какво остава за случаите в които авторите са решили да разнищят някоя наистина важна и наболяла тема каквато е световното замърсяване и съдбата на тоновете отпадъци които човечеството неуморно и неизменно генерира всеки ден. Точно такава книга е „Къде отива боклукът? Отпадъци рециклиране и грижа за нашата планета” на Джес Френч която за наша огромна

радост излезе и на български като част от каталога на изд. „Къде отива боклукът?“ ще отвори очите на много читатели от всички възрасти по редица важни теми засягащи всички нас и бъдещето на света в който живеем. И за да докажат че застават зад всяка дума написана вътре издателите дори са се погрижили книгата да бъде направена от устойчиво добити материали и растителни масла! Прочетете ревюто на „Книжни Криле“: <https://knjnikrile>. Jess French draws awareness to how humanity is trashing the planet with its throw away culture by organizing the book in such a way that could be taught part by part depending on what an educator might be teaching their class. Graphics actual photographs and chunks of information make French's approach to showing how people can revert the damage done to the Earth as well as explaining what has caused issues in nature due to various types of pollution loss of Earth's resources and deforestation. More of an instructional type book What a Waste: Trash Recycling and Protecting Our Planet is not a book every educator needs to have but it is definitely worth a look and read. 1465481419 Книгата формално е за деца но информацията която предоставя за състоянието на планетата ни е насочена към абсолютно всеки. Научих страшно много за реалните мащаби и ефекти на замърсяването както и за начините по които сме способни да смекчим щетите. Сигурна съм че ако сте родител ще направите голяма услуга на детето си като му помогнете да се образова отрано за проблема. 1465481419 Колко често се замисляме за това къде отива боклукът ни след като го изхвърлим в коша? Признавам си че лично аз не съм се замисляла чак толкова но тук в тази книга ще видим различни примери за боклук които правим в ежедневието си и то може би без да осъзнаваме. Един от многото и глобални проблеми е използването на пластмаса вярно че в днешно време почти всичко което използваме и купуваме навън съдържа пластмаса но и тук е намерен алтернативен вариант. От нас се иска само да осъзнаем колко е вредна за нас за земята и за животните и разбира се може да си намерим заместители. Пластмасата е толкова опасна защото тя не може да се разгради най-застрашени са морските създания които бъркат парченцата пластмаса с храна или пък след като бъде изхвърлена в океана те направо се заплитат в нея. Както казах авторката ни дава много примери от ежедневието като например видовете замърсяване - било въздушно шумово светлинно и други. Книгата съдържа в себе си и много факти статистики и разнообразна информация като влиянието на модата в произвеждането на вреден боклук и как може да го направим да бъде полезен. Радвам се че прочетох книгата защото тези статистики които прочетох за боклука и които всъщност повечето са свързани с ежедневието ме накараха да се замисля колко наистина е ГЛОБАЛЕН проблема с боклука. Да много по-лесно е да си отворим прозореца и да си изхвърлим боклука и да не се занимаваме повече но така не е редно. Всички неща са свързани затова трябва да се замислим как може да си помогнем около нас да бъде по-чисто да бъдем по-здрави природата животните и самата ни земя да бъдат по-здрави. Не казвам че ще успея успешно да започна да спазвам всички алтернативни примери дадени в книгата но това не значи че не мога да се опитам да направя и да си намеря удобни начини с които да помогна за този глобален проблем. И все пак една птичка пролет не прави трябва всички да се замислим и малко по-малко да започнем да работим за отстраняването на проблема! Отпадъците са всичко онова което изхвърляме. Екологията поднесена на разбираем език с великолепни насоки как да редуцираме боклука в живота си да изхвърляме разделно и да рециклираме. А ви💎💎 знаехте ли например че почти половината от боклука в Голямото тихоокеанско сметище се състои от изхвърлени от рибари мрежи? И че е с размер колкото три пъти площта на Франция?! Жестоко е колко малко знаем. Винаги съм смятала че е крайно време и България да вземе решително отношение към образованието на деца и на възрастни по отношение на боклука а не да разчита на неправителствени организации за това. Крайно време е наистина да имаме достатъчно добри разяснителни кампании как да живеем в по-голямо съзвучие с природата за да не отровим напълно и нищожния 1% питейна вода в света ни,

And Protecting Our Planet Author: Jess French Book Level: LGR Reading Level: 3. 9 Book summary:

This book talks about how each of us can actively help protect our planet by reducing the amount of waste we have and learning how to recycle: Bookshelf Mentor Writing Trait:

Organization/Presentation: This book instantly grabs the reader's attention through the bright colored pages filled with pictures and text. This book doesn't follow a traditional layout but instead uses text boxes to support the illustrations: Students will learn through a sequence of illustrations and text boxes how they can make an impact on the planet. I would use this book as a content coursebook in science where students are learning about the environment, A couple of different activities that I would use with this text is Question-Answer Relationships where students will have to answer questions from a variety of categories, These questions will require students to use the mentor text to answer them as well as additional research and self-reflection on how they can make an impact on our planet. This would also be an excellent text for students to use Double-Entry Journals where students can complete writing prompts from facts and quotes they learned about in the book. This informative book teaches children all the good and the bad that they need to know about taking care of their environment. Taking small steps of change can encourage students to do even more when wanting to keep our planet/environment healthy for the endurable future: I would utilize this book as a whole-class read aloud and provide it as an individual book for independent/silent reading. The book is just as environmentally friendly as the information it provides to students on the inside: 1465481419 I received an ARC and it's another fabulous fact-filled DK book that explores what to do with waste, Tons of great information set out in an easy to read format dealing with environmental issues, 'Presented with current facts figures graphic representations photographs dialogue boxes in the vibrant DK style many environmental issues are explored. Deforestation and land clearing are major problems with 15 billion trees cut down each year, The site of 'The Great Pacific Garbage Patch' in the north Pacific Ocean contains plastic rubbish that weighs as much as 500 jumbo jets, Each spread includes clearly defined explanations questions and ways children students families and communities can assist in recycling reducing waste and protecting our environment, E-waste food waste water waste and industrial waste are key areas of concern, Bold statements and facts presented as percentages - 45% of lettuce in the UK is thrown out provide interesting talking points for environmental science lessons: 'What a waste' is another visually outstanding DK information book which presents current environmental concerns and shows how people are developing solutions giving hope for the future. Jess French encourages us all including younger readers to speak up be a plastic-free family and make positive changes. The layout breaks the boundaries of how books are usually written. I love the facts that are included throughout with many of them being ones that I had not heard of myself. This would be great to introduce a topic either science or geography and can include many cross - curricular links such as English Art and even Maths: However this book would also interest a child looking for something to read by themselves. The bright colours on every page keeps readers interested and engaged. 1465481419 Excellent visually engaging and appropriately detailed book covering all sorts of waste & how we can minimise it. She thinks it is very important that we all work hard to protect the natural world so she writes books about how we can do that. The books are mainly marketed at a children but Jess knows that its mostly the grown ups that need educating, She thinks it is very important that we all work hard to protect the natural world so she writes books about how we can do that: The books are mainly marketed at a children but Jess knows that it's mostly the grown ups that need educating. {site\_link} In this informative book on recycling for children you will find everything you need to know about our environment. From pollution and litter to renewable energy and plastic recycling, This educational book will teach young budding ecologists about how our actions affect planet Earth and the big impact we can make by the little things we do, While this is a knowledge book that explains where we are going wrong What a Waste also shows what we are getting right! Discover plans to save our seas, How countries are implementing green projects worldwide and how to turn waste into something useful: The tiniest everyday changes can make all the difference to ensure our beautiful planet stays lush and teeming with life: It is a lively kid's educational book with fabulous illustrations and fun facts about the world broken into easy to digest

bite-sized bits: Each page can be looked at in short bursts or longer reads for more detail making it a great children's book for a range of age groups: Get Involved - Make A Difference! Almost everything we do creates waste from litter and leftovers to factory gases and old gadgets: Find out where it goes how it affects our planet and what we can do to reduce the problem, Това не е нито просто детска книга нито пък строго семейно четиво: 1465481419 'What a Waste: Trash Recycling and Protecting Our Planet is an excellent book that is informative and visually keeps the reader's eye moving across each page: The illustrations appear to be layered collages with bright coloring to also draw the reader in to the importance of the content, I am personally all about bringing awareness to others of pressing issues that effect the every day lives of both humanity and the creatures that call the Earth their home. Дори и най-простичката промяна на навиците би могла да помогне неимоверно ако се положи съзнателно усилие: Дадени са доста такива примери за направата на боклук и още толкова алтернативи: След това преминаваме през земните ресурси тяхното изчерпване и възстановяване и други. Всички тези неща са придружени с голям набор от снимки и различни рисунки: Първо е грозно второ - нарича се боклук защото е остатък от нещо и вече е като замърсител, Замърсител който влияе зле на нас хората на животните на природата и като цяло на земята, Всяка наша дейност произвежда някакви отпадъци: Въпреки това е важно да се уверим че не създаваме излишни отпадъци. --- --- --- --- --- Благодаря Ви за отделеното време!!! 1465481419 Горещо препоръчвам за деца и за възрастни, Вредата от замърсеността на въздуха която отнема по 7 млн живота годишно и намаля коефициента ни на интелигентност. Или поне да научим повече как трябва да разделяме боклука си за да има шанс за рециклиране. Препоръчвам!Вече и с въпросник в Книговище. As the teacher.

I would rate. What A Waste by Jess French 5 out of 5 stars. 1465481419 I found this a fantastic book for young children. 1465481419 Jess loves all animals. She loves the natural world they live in too.As well as writing Jess works as a vet. She loves the natural world they live in too.As well as writing Jess works as a vet. The good the bad and the incredibly innovative. „Ракета”.wordpress.com/202. Те са част от живота който водим. Космическият боклук. Замърсяването в реки и океани. Вездесъщата пластмаса. Все отнякъде трябва да се почне. Книгата е великолепна наистина. 1465481419
